

Ensuring a Healthy and Safe Work Environment

As employers and employees work together to increase health and safety in the workplace, AVUITY can bring greater intelligence, consistency, and simplicity to the effort. Our hardware and software platform enables employers to make informed, data-driven decisions about workspace management and employee experience that help ensure a safe, healthy, and productive workplace.

Challenges

Ensure clean buildings, equipment, and workstations.

Managing office configurations, including unassigned seating, that don't promote social distancing.

Maintaining a dynamic workforce by balancing an agile office strategy with remote working.

Implementing new sanitizing and cleaning protocols.

Reducing congestion within common areas.

Handling touch technologies at meeting spaces.

AVUITY is a data-driven technology firm with a hardware and software platform that measures and analyzes space utilization in human environments of all shapes and sizes. Our flagship products, VuAI, VuSensor and VuSpace, can be configured as needed to identify and analyze trends in space usage to help organizations increase efficiency, optimize their real estate portfolio, and enhance the experience of everyone using their space.

Building Employee and Customer Trust

At AVUITY, we have enhanced our hardware and software platform and added new features to specifically address the growing concerns around health and safety in the workplace. We empower companies to create a more flexible and agile workplace for today's modern workforce, while ensuring a healthy and safe environment for employees and customers alike.

Understand Your Space Usage

Set capacity levels and receive notifications for areas that are highly populated or over capacity. Receive detailed reporting on workspace trends to better inform organization guidelines.

Employee Experience

Enable employees to easily view on a mobile app areas of increased activity, as well as workstation use and cleaning status.

Focused Cleaning

Provide notifications to sanitation team when workstations, meeting rooms, cafes or restrooms reach a threshold of visitors and require cleaning.

Social Distancing

Use sensor technology to stagger workstation occupancy and measure distances between people.

Modernized Protocols

Adjust safety practices and protocols as health concerns change and evolve.
